**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election of Group I and Species (a) in the reply filed on 12/21/2008 & 03/12/2009 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 87-95,104, and 107-119 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group and species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12/21/2008 & 03/12/2009.
3. Additionally, note that claim 104 has been withdrawn by the examiner as not being readable upon the elected group/species.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 83-86 are rejected under 35 U.S.C. 102(b) as being anticipated by Blacklock et al. (US 5,695,334).  
  
Blacklock discloses an amenable abutment device that includes: a prefabricated intra-implant element (104) that fits in the dental implant or implant analog (2); a

prefabricated intra-crown element (102) to be connected to the dental prosthesis (6); a resilient intermediary connection element (106) for connecting between the intra-crown element and the intra-implant element (104); wherein the intermediate element comprises a deformable element and bonding material (108) wherein the bonding material is wax (column 5, line 11); wherein the connection element is capable of being adjustable in height orientation and lateral position that is used to determine a proper relative position of the intra implant element with respect to the intra crown element so as to facilitate forming a model abutment or a permanent abutment; wherein the intra-crown element is capable for precise fitting to an adapter; and wherein the deformable element (108) comprises an initially soft material that is eventually capable of hardening.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 96-98, 100-103 and 106 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blacklock in view of Phimmasone (US 5,658,147).

Blacklock discloses the invention substantially as claimed except for a kit comprising a plurality of the various claimed elements and wherein the intra crown element is adapted to fit into a porcelain crown.

Phimmasone teaches a dental crown (21) made out of porcelain (column 4, line 35). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Blacklock to include a crown made of porcelain, as taught by Phimmasone, since such crowns are well known in the art. Furthermore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Blacklock/Phimmasone to include a kit containing a plurality of the claimed elements in order to provide multiple dental restorations for a patient in need of more than one tooth restoration.

Claims 96-98, 100-103 and 105 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blacklock in view of Feng (US 2005/0048440).

Blacklock discloses the invention substantially as claimed except for a kit comprising a plurality of the various claimed elements and wherein the intra crown element is adapted to fit into a temporary crown

Feng teaches an abutment device adapted to attach to a temporary dental crown (141). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Blacklock to include a device that is adapted to fit into a temporary dental crown, as taught by Phimmasone, since devices are well known in the art. Furthermore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Blacklock/Feng to include a kit containing a

plurality of the claimed elements in order to provide multiple dental restorations for a patient in need of more than one tooth restoration.

***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892 Form.
